CENTRALIZED REMOTE MONITORING SYSTEM

Benefits of CRMS "Centralized Remote Monitoring System"

The greatest benefit of is the peace of mind it gives you, knowing that your site is being closely monitored by professionals using high-tech IP surveillance systems 24/7 in real-time.

Eliminate the need for an on-site guard by instead setting up a CRMS. While a guard would have to be present for many hours to be effective, a CRMS can keep an eye on your premises without the need for a physical presence. This system will be alerted to any signs of movement, allowing a professional at a monitoring centre to take action.

A fantastic feature of our CRMS system is the flexibility, allowing the live footage to be viewed from afar. All you require is a healthy internet connection to access live feed of your CCTV Cameras, making this method incredibly convenient.

Combination of technology with human intelligence to detect and help prevent crimes in progress and ability to see criminal activity in real-time often results in quicker response time.

Whilst other security systems may be slow to react to an intrusion or break-in, a CRMS is a quick technique that can alert the emergency services within minutes of detecting suspicious movements or activities. Our emergency rapid response team gives it an edge over other techniques, and boosts the likelihood of the criminals being apprehended.

CRMS's proactive approach includes highly trained staff monitoring key areas of your property to help prevent crime before it happen. We watch for actively in real time and can contact you and your close contacts and can call Police, Fire and Hospital regardless to the situation.

Presence of a security camera is enough to make potential intruders think twice about entering your property. To enhance this benefit, CRMS has the ability to communicate directly with the would-be criminals over a loudspeaker, which is also an effective deterrent.
